Main.Py

"entry Point"
- controls flow
- calls Crawler → Parser → save output

"URL discovery" engine

Crawler.Py

Responsible for finding course URLs
- If website changes only crawler changes

Parser.Py

Extracts structured data from one page
- This is where schema mapping happens

Config.Py

All constants here
- Avoid hardcoding everywhere
- Easy to change later

Utils.Py

Helper Functions
- Safe text extraction
- cleaning functions

"Workflow"

Main.Py → Pipeline.Py

↳ entry Point

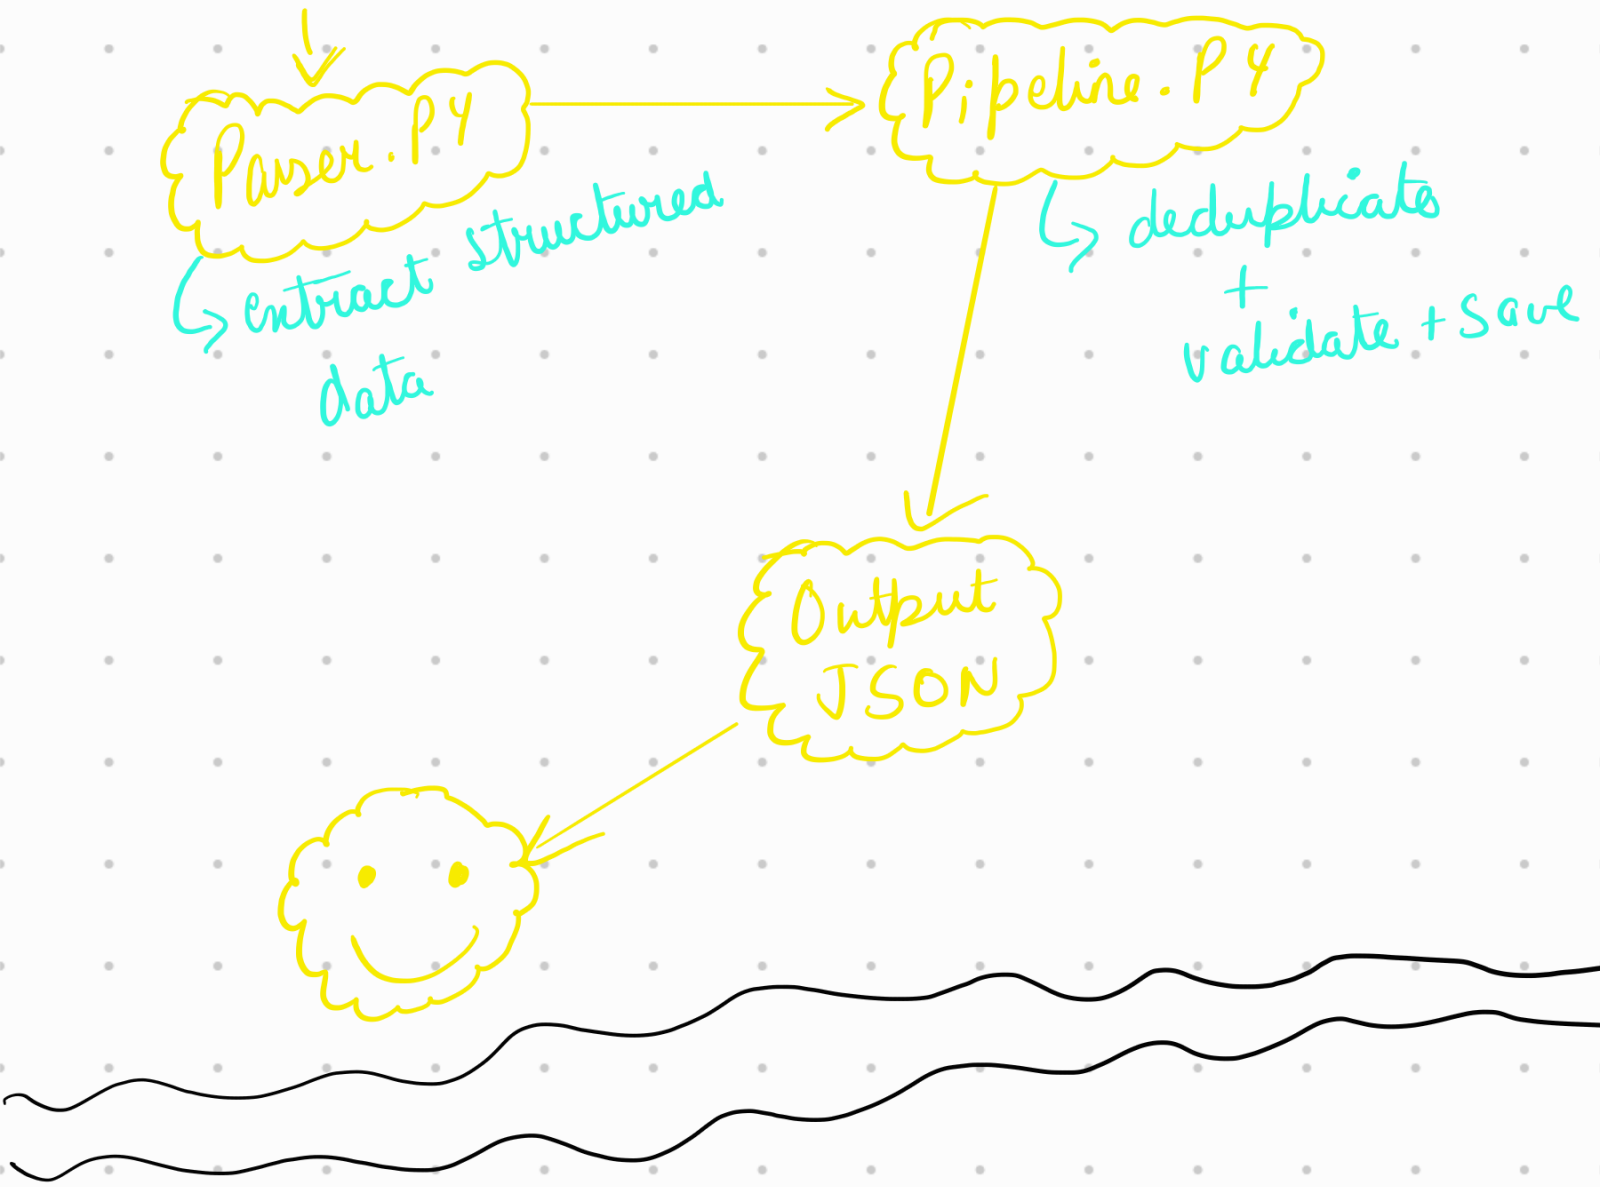
Pipeline.Py → Crawler.Py

Crawler.Py → HTTP Client.Py

↳ get course URLs

HTTP Client.Py

↳ Fetch HTML Safely



Parser.py
extract structured data
Pipeline.py
deduplicate + validate + save
Output JSON
